
EXAMPLE 2 – JAVASCRIPT FORMS

Create a form with the following elements:

1. A textbox of minimum 2 and maximum 25 characters, with an *Introduce a name* label:
 - a. When a lowercase letter is typed, it will automatically change to uppercase.
 - b. When the text box loses focus, check the validity and, if wrong, show a warning underneath and turn the background of the textbox to light red.
 - c. When the content of the text box becomes valid, turn the background of the textbox to white, and delete the warning.
2. A textbox *Age* and an email box with labels and restrictions. Implement b&c items from exercise 1
3. Add a reset button that opens a confirmation window to make sure that the user wants to reset all the fields.
