## EXAMPLE 1 – JAVASCRIPT EVENTS

---

Use event listeners for the next exercises:

1. On Click of a button, read the user name written in a textbox and display a welcome message in a label.
2. Copy the text of a first text box to a second text box on every change of value of the first text box
3. Change the source of an image element on mouse over and restore it on mouse out
4. Write a JavaScript program to calculate the volume of a sphere.

Input radius value and get the volume of a sphere.

Radius
